

ARCTIC CLIMATE CHANGE CYCLE

illustration by Fabian Rudolf

timeframe

2000-2100 AD

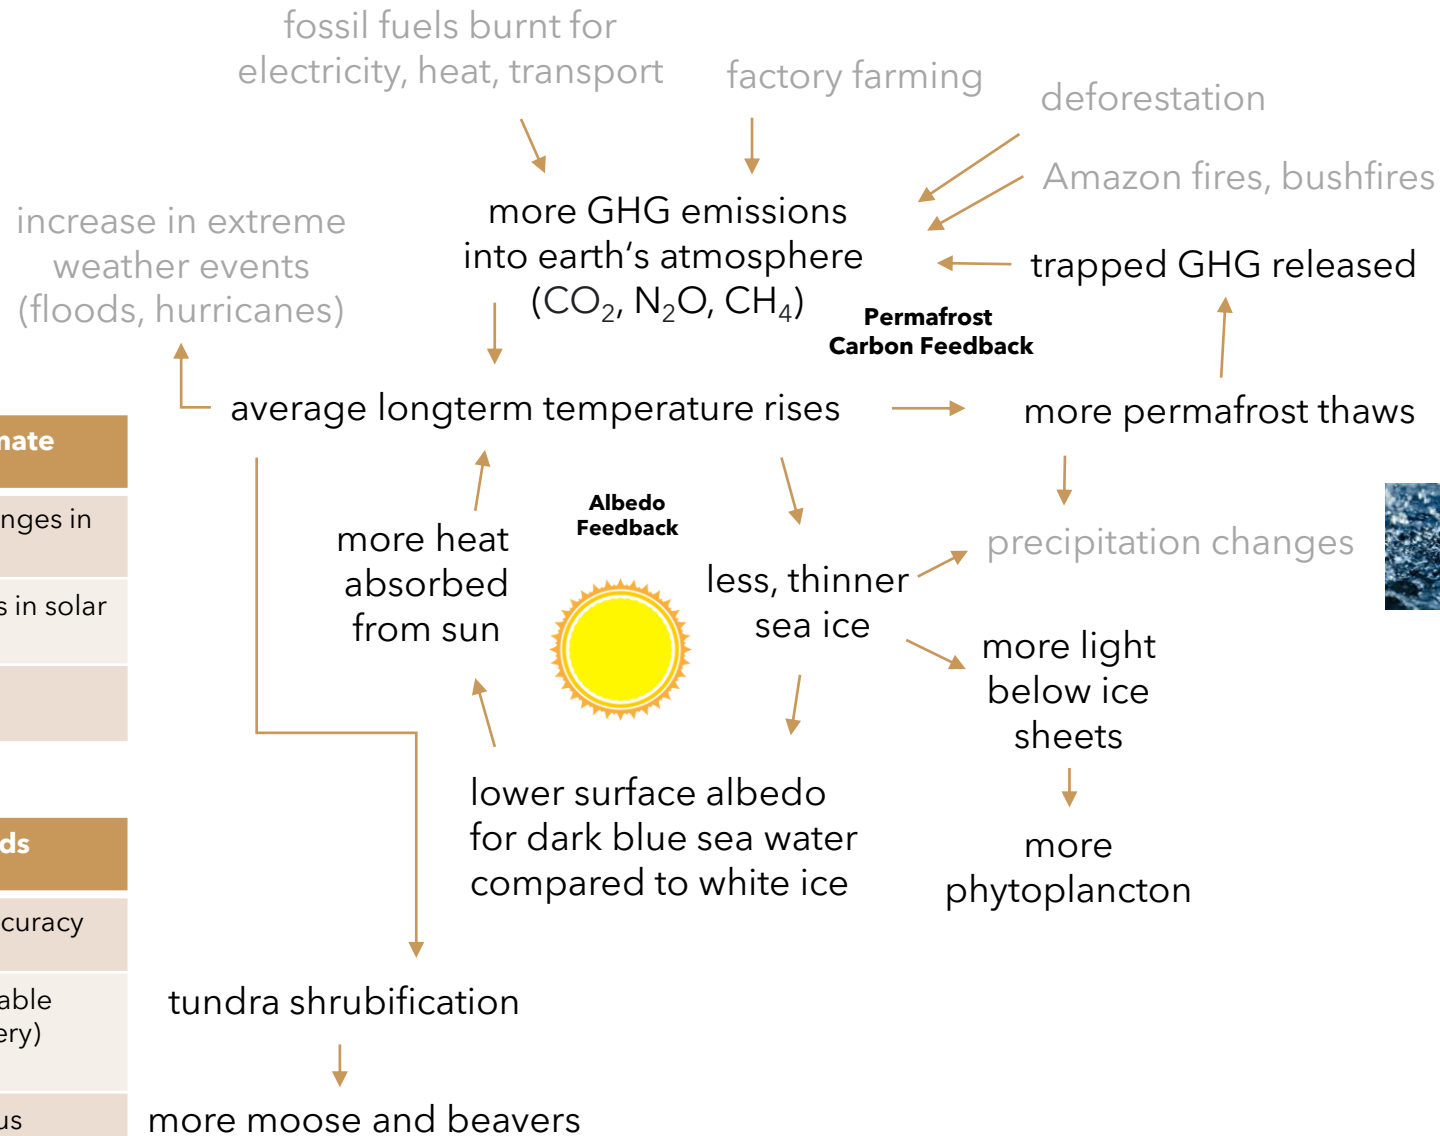

epoch

holocene started

11,650 cal BP

/

anthropocene has
human as key
driver of earth's
processes

General Effects on Climate

Milankovitch cycles (changes in earth's tilt)

solar variability (changes in solar radiation)

volcanic activity

General Research Trends

higher climate model accuracy

higher quality data available
(e.g. from satellite imagery)

higher sustainability focus

RCP2.6 / 8.5 model
(source: IPCC)
